

# BEACON HEALTHCARE™

## ADVANCED COMMUNICATIONS SOLUTIONS

### QUICK OVERVIEW

#### ▶ APPLICATIONS

- Enhanced healthcare communications applications
- Directly connects clinicians, staff and patients
- Provides personalized messaging and information access

#### ▶ FLEXIBILITY

- Supports a variety of devices including mobile phones as well as wired and wireless IP phones
- Provides varied message types including text, voice and text-to-speech (TTS)

#### ▶ MANAGEMENT

- Simple web-based user interface for administrators
- Supports centralized management of all features
- Complete logging of events for compliance purposes

#### ▶ INTEGRATION

- Developed for Cisco Unified Communications environments
- Integrates to healthcare systems through an HL7 gateway interface
- Easily customized to an organization's unique requirements.

### HEALTHCARE APPLICATIONS FOR CISCO UNIFIED COMMUNICATIONS SYSTEMS

**Radianta** introduces Beacon Healthcare™, an advanced communications solution for healthcare providers. The ability of a healthcare organization to assess information and respond to critical issues can be a matter of life and death, where success or failure is measured in moments. Specifically designed for Cisco Unified IP Communications environments, Beacon Healthcare™ is designed to streamline communications between healthcare professionals, hospital staff and patients.

**Critical Results Reporting.** By integrating with a healthcare provider's Electronic Medical Records, Radianta's Critical Results Reporting (CRR) module facilitates more effective communication between specialists, doctors and nurses in the situation where a critical patient event has been uncovered. Communications can be immediately directed to single or multiple care providers and all reporting is logged for post-event information analysis.

**Personal Interaction Portal.** Personal Interaction Portal (PIP) provides more effective communication of key information to clinicians. By integrating with a healthcare provider's EMR, information such as patient lab results and pharmacy information can be securely accessed by healthcare providers. In addition, specialists can be connected to each other via voice at the touch of a button. PIP provides specific, customized information pertinent to each individual healthcare professional and all interactions are logged for compliance purposes.

**Healthcare Communications Manager.** Healthcare Communications Manager (HCM) provides a host of communications functions in support of key healthcare requirements. HCM provides robust paging and notification capabilities, including Text, Text-To-Speech and Audio paging, advanced one-touch conferencing, intercom, and more.

**Healthcare Appointment Manager.** Healthcare Appointment Manager (HAM) integrates with Cisco Unified Communications Manager to provide robust outbound appointment reminder notifications. The solution allows contacted individuals to accept or cancel the appointment, or be routed to a contact center representative to reschedule.

Ensure timely communications within your organization. Beacon Healthcare™ enables healthcare organizations to more effectively connect clinicians, staff and patients.
